College Fest Management Website

HTML structure, CSS styling, and browser output

Title and description

The screenshots show a webpage for **Campus Fest 2026**, a college festival featuring technical, cultural, and workshop events. The page introduces the fest, shows an event schedule and participation rules, and provides a registration form. This report explains the visible HTML and CSS elements in order, includes the screenshots, and concludes with the project summary.

Screenshot order

Screenshot 1 shows HTML, screenshot 2 shows CSS, and screenshot 3 shows the rendered website. The source screenshot displays only the visible portion of the editor, so descriptions follow visible code and page content.

HTML Description in Order

The first screenshot shows the following document structure.

Visible HTML element	Purpose
Document declaration and html/head	Starts an HTML5 document and contains page information.
Title	Sets the browser title to “College Fest.”
Viewport meta tag	Helps the page scale appropriately on different device widths.
Stylesheet link	Connects the page to fest.css.
Header and main heading	Displays “Campus Fest 2026” as the page’s primary heading.
Introductory paragraph	Adds the tagline “Fun, learning, and competitions!” below the title.
Register Now link	Provides a call-to-action link that points to the registration section.
Our Events heading and section	Introduces the event cards grouped inside the events section.
Event cards and images	Each card contains an image, an event category (Technical, Cultural, Workshop), and a short invitation. Image alt text describes the picture.
Schedule section	Lists the times for technical events, workshops, and cultural events.
Rules section	Displays a reminder to bring a college ID and follow the coordinators’ instructions.
Registration section and form	Provides name and email fields plus a submit button. The form area is identified by an id for the Register Now link.
Remaining content	The screenshot cuts off below the visible lines, so any further HTML is not described as readable source.

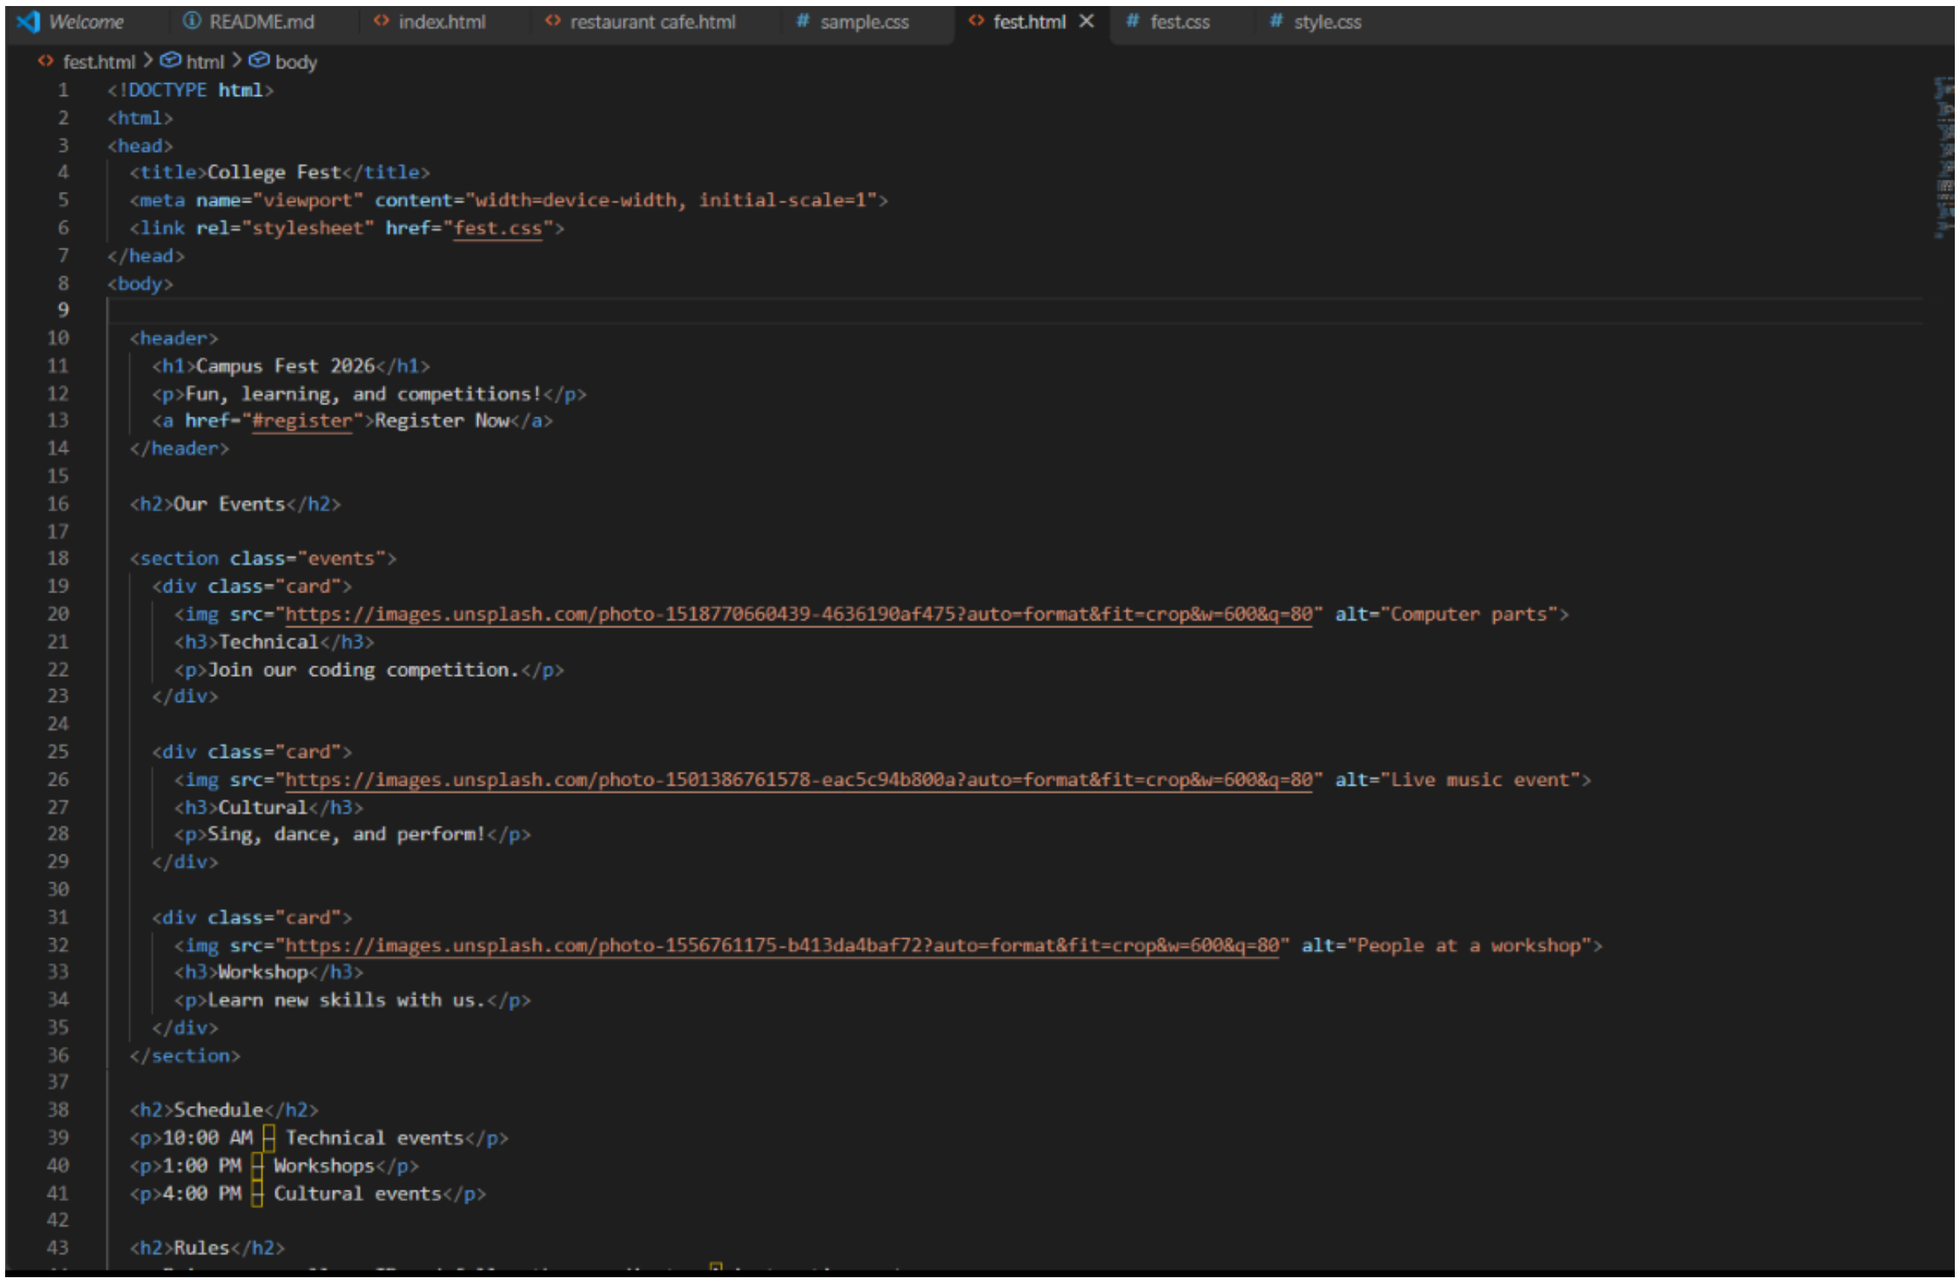

CSS Description by Element

The second screenshot shows CSS for the page body, header, event cards, images, and registration form.

CSS selector / rule	Description
body	Removes default margin, uses Arial/sans-serif text, centers content, and sets a dark text color.
header	Adds generous padding, white text, and a dark blue background.
header a	Makes the header link white for contrast against the blue background.
.events	Uses flexbox, centers event cards, allows wrapping, and sets consistent gaps between cards.
.card	Sets a fixed card width, adds space below, and uses a light gray background.
.card img	Makes each image fill the card width, gives it a fixed height, and crops it with object-fit: cover.
form	Limits the registration form width and centers it on the page.
input, button	Makes form controls fill the form width, adds padding, and separates them vertically.
button (visible rules)	Sets white text, a dark blue background, and removes the default border.
Overall effect	The rules create a centered layout with a blue festival banner, flexible event cards, and a simple registration form.

Rendered Website Output

The browser screenshot shows the finished Campus Fest page, from the banner to the footer.

Conclusion

The Campus Fest 2026 website combines HTML and CSS to make festival information easy to explore. HTML groups the event listings, schedule, rules, and registration controls into clear sections. CSS provides the blue-and-white theme, arranges event cards with a flexible layout, formats images, and keeps the form centered and readable. The result gives students a single page to learn about the festival and register.
